SaaS/ON-PREM
MODE

END-TO-END PROTECTION OF SENSITIVE DATA

Data-Centric Security

Our Data-Centric Security approach provides finer-grained control over access to information to ensure a more effective level of protection.

A no-compromise solution

Zero Trust grants no implicit trust; decryption takes place solely on authorised client devices, with granular governance of access policies.

Secure Collaboration

Fully integrated with your development and collaboration platforms, it guarantees end-to-end data protection whilst maintaining end-users' familiar workflows.

FOR **SOVEREIGN SaaS ENCRYPTION**

The Stormshield Collaborative Encryption Platform is a sovereign SaaS encryption solution that enhances the confidentiality of sensitive data and simplifies compliance with regulations such as NIS2, DORA and the GDPR.

Data control and compliance

You retain control over your company's sensitive data and meet the **compliance requirements of regulations such as DORA and the GDPR**.

Data access monitoring

You **have complete control over key management** and know which users have access to your company's sensitive information.

Ease of implementation

You use **a turnkey, agent-free SaaS solution with no additional costs** for maintenance or staff training.

Peace of mind

Your employees use a cybersecurity solution that is **fully integrated with their tools** and does not change their working habits.

Key management

Seamless Key Management

The solution automatically generates content encryption keys and performs the necessary renewals. The solution allows compromised keys to be revoked.

Bring/Hold Your Own Key (Option)

The customer manages and provides the encryption keys to be used by the solution (*Bring*). The customer manages a master key that will protect the encryption keys used in the solution, which do not store the master key (*Hold*).
